

problem

André Caperville

28 years old, Enterprise Architect

- > He is working on the exchange of social security information between public administrations.
- > He would like to know what public administrations in neighbouring countries have already done in that field.
- > He would like to explore standards, specifications, services and tools specific to that context which have been proven successful.

1 André would like to explore online collections of interoperability assets

2 André looks for such assets on Google

About 27.800.000 results (0,16 seconds)

PROTECTUS - more efficient social security information exchange
Policy background: information exchange to preserve citizens' social security rights ... format and XML standards for the exchange of social security information ...

...but

The assets are not grouped by context and therefore hard to find on the web. This costs André time and effort.

solution

The online search tool for interoperability assets on Joinup will solve André's problem

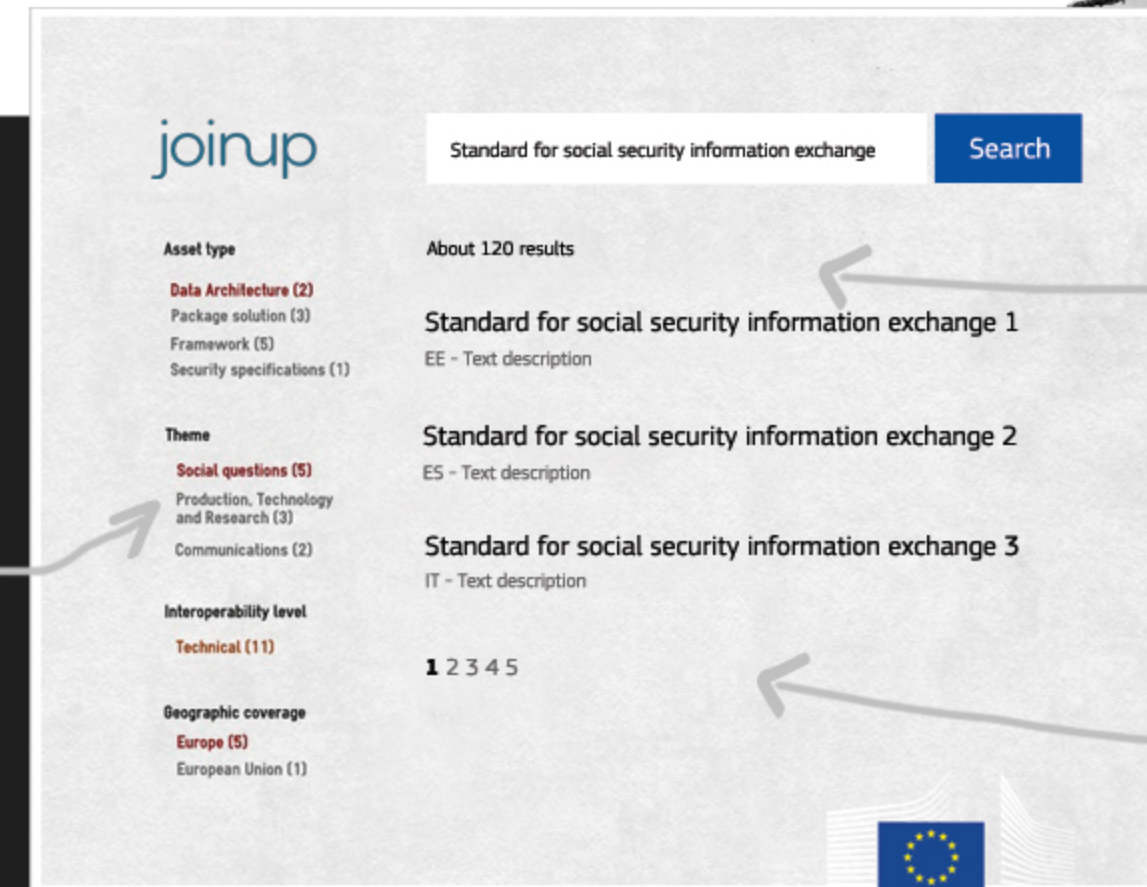

- Would you be interested in quickly reusing interoperability assets shared by public administrations?
- Would you share yours?
- What are the services that you expect from this search tool?

EFIR

European Federated Interoperability Repository

Your online search tool for interoperability assets on Joinup

About the EFIR Action

This survey has been prepared in the context of the ISA Programme's EFIR Action (Action 4.2.4) on the creation of a European Federated Interoperability Repository (EFIR) on Joinup.

This action comes as a follow-up to the success of the ADMS-enabled federation, a catalogue of semantic assets described using ADMS, with already sixteen federated repositories. The objective of this action is to extend the current catalogue, available on Joinup, to other types of interoperability assets and solutions (legal, organisational and technical).

Why is it relevant for you?

You can benefit from this action in two ways: as a contributor to the federation and/or as a consumer of interoperability assets. As a contributor you can share your interoperability assets, and as a result, your assets would be easier identified, understood, reused and therefore, more valued. As a consumer of interoperability assets, you will be able to save time, reduce cost, get a better overview on how to be compliant in the context of cross border information exchange, and avoid interoperability issues.

Why your contribution is needed?

In order to achieve this, the ISA programme needs to assess the current status in European Member States with regards to repositories that store and make available interoperability assets and public administration information systems. Your contribution will significantly help ISA in taking into account your needs, your requirements, your plans and your constraints while building the future European Federated Interoperability Repository (EFIR).

What are the objectives of the survey?

With the above in mind, ISA has decided to submit a survey with the following key objectives:

- Understand the current state of affairs with regards to the sharing and reuse of interoperability assets in EU Member States.
- Identify needs and gather basic requirements on the future federation of interoperability assets on Joinup;
- Raise awareness on the European Federated Interoperability Repository (EFIR) project, solicit comments and identify potential participants for the future workshop that will be held end of April;

How your input will be used?

Your feedback will be compiled in a document summarising the survey results, and presented in a workshop that will be organised end of April. We will identify, analyse and prioritize the collected requirements taking into account your views. This will help refine the scope and draft the functional specifications for the EFIR infrastructure on Joinup.

To whom this survey is addressed?

You have been selected to participate in this survey because either:

- You are a representative of a Member State participating in ISA's Trusted Information Exchange cluster; or
- You have been indicated by a Member State representative as a contact person because:
 - You work in the area of interoperability;
 - You are the owner or person in charge of a website that hosts technical, organisational and / or legal interoperability assets.
